Special thanks to

nativeDSD MUSIC

Native DSD music and iFi audio are proud to collaborate together with the latest DSD256fs sampler album to celebrate the launch of the flagship Professional series. The first product, the Pro iCan is a professional studio grade headphone amplifier and an audiophile line-stage. The Native DSD music album contains 4 cherry-picked DSD 256 songs for you to enjoy. Why iFi and Native DSD? Its because we both bring out the best in each other.

iFi

iFi enjoys PCM and DSD, which is why the specially-selected Burr-Brown chip was chosen as it keeps each format in its native state as it travels through the dac chipset. Both iFi and Native DSD Music care passionately about the ultimate in sound quality and when it comes to DSD recordings, Native DSD Music continues to push the boundaries - with DSD256 recorded music in particular. This is why we made this album for you, the listener.

With a DSD recording and an iFi DSD DAC, you experience the recording in high definition from start to finish.....

Is the juice worth the squeeze?

Have a taste of 'True Native'

A quote from iFi's design department: *"Playing digital audio is something similar to the production of juice. You can take fruit and squeeze out the fresh juice, and can be subjected to a fruit frozen, dried, crushed into powder, and then dissolve the powder in water . When you convert sound something happens to this in the same way - instead of natural juice diluted with water output is a powder. But not for us, because when we are not processing audio abusing digital conversion. Our juice is freshly squeezed always! "*

Enter..... nativeDSD MUSIC .....connecting you to pure music!

iFi Native DSD products

iDSD nano

(Tier 1) - The worlds smallest, portable, headphone amplifier and native DAC that handles all high resolution files such as PCM, DXD, DSD256 (cap). Experience DSD on the move!
